📄 DOCUMENT 5

Stakeholder Mapping & Bureau Readiness Framework

Hawassa MESOB One-Stop Service Center

Prepared For:
H.E. Mayor Tiratu Beyene
Hawassa City Administration

Prepared By:
Chief Enterprise Architect & Lead Consultant
Hawassa MESOB One-Stop Service Program

PART 1

(Sections 1–4: Stakeholder Landscape, Governance Structure, Bureau Classification Model, Readiness Framework for Bureaus WITH Existing IT Systems)

---

1. STAKEHOLDER LANDSCAPE OVERVIEW

The MESOB One-Stop Service Center is not a single-organization project.

It is a city-wide transformation program involving:

- Executive leadership
- Technical implementers
- Service-owning bureaus
- Infrastructure providers
- National MESOB coordination body
- Financial institutions
- Citizens & businesses

Without structured stakeholder governance, integration failure is inevitable.

1.1 Primary Stakeholder Groups

1. Executive Leadership

- Hawassa City Mayor (Program Sponsor)
- City Cabinet
- Bureau Heads

Role:

- Political authority
- Policy enforcement
- SLA accountability
- Conflict resolution

---

2. MESOB Core Implementation Team

- Chief Enterprise Architect
- Program Manager
- Integration Lead
- Infrastructure Lead
- Legal & Compliance Advisor
- Finance Controller

Role:

- Design & coordination
- Technical validation
- Vendor supervision
- Progress reporting

---

3. Service-Owning Bureaus (Phase 1)

Bureau	Primary Phase 1 Role
Land & Cadaster	Lease, title, valuation
Revenue Bureau	Tax & payments

Bureau	Primary Phase 1 Role
Trade & Industry	Licensing
Investment Office	Project registration
Health Office	Clinic permits
Education Office	School permits

---

4. Infrastructure Provider

Primary Candidate:
Ethio Telecom (subject to contract finalization)

Potential Scope:

- Hosting infrastructure
- Connectivity
- Queue management system
- Operational platform

Scope Clarification Required:

- API development responsibility
- Backend system creation (for bureaus without systems)

---

5. National MESOB Taskforce

Role:

- Federal alignment
- API Gateway/Mesh connectivity
- Inter-governmental standards
- Compliance validation

---

2. GOVERNANCE STRUCTURE FOR MESOB

2.1 Executive Steering Committee

Chair:
Mayor

Members:

- Bureau Heads
- Program Director
- ICT Representative
- Finance Representative

Responsibilities:

- Policy decisions
- Escalation resolution
- Budget approval
- Performance review

Meeting Frequency:
Monthly (during Phase 1)

2.2 Technical Steering Committee

Members:

- Enterprise Architect
- Integration Lead
- Vendor Technical Lead
- Bureau IT Heads

Responsibilities:

- API review
- Integration testing
- Infrastructure validation
- Change control approval

Meeting Frequency:
Bi-weekly

2.3 SLA Compliance Unit

Responsibilities:

- Monitor service performance
- Generate monthly reports
- Escalate SLA breaches
- Recommend corrective actions

Reports directly to Mayor's Office.

---

3. BUREAU CLASSIFICATION MODEL

Critical distinction:

All bureaus fall into one of two categories.

CATEGORY A

Bureaus WITH Existing IT Systems

Examples (subject to verification):

- Land Registry System
- Tax Collection System
- Business Licensing Database

Characteristics:

- Existing database
- Operational software
- Internal digital records
- Some level of automation

Risk:
Lack of API exposure.

CATEGORY B

Bureaus WITHOUT IT Systems

Characteristics:

- Paper-based records
- Manual registers
- No structured database
- No API capability

Risk:
No integration readiness.

---

4. READINESS FRAMEWORK

FOR BUREAUS WITH EXISTING IT SYSTEMS (CATEGORY A)

This section provides a structured checklist.

These bureaus must prepare for API integration.

4.1 Governance & Policy Readiness

Checklist:

□ Bureau head formally commits to digital integration
□ Data-sharing agreement signed
□ Legal clearance for API exposure granted
□ Internal digital transformation focal person appointed

4.2 Technical Readiness Checklist

Each Category A bureau must confirm:

□ Database structure documented
□ Data fields mapped
□ Data quality audit completed

□ Duplicate record assessment completed
□ Access control model defined
□ Backup system verified

4.3 API Exposure Requirements

Each bureau must:

□ Identify data endpoints required for MESOB
□ Define input & output fields
□ Approve REST-based API format
□ Support token-based authentication
□ Support encrypted communication

4.4 Minimum API Set Per Bureau

Example: Land Bureau

Must expose APIs for:

- Lease retrieval
- Ownership validation
- Arrears check
- Transfer update
- Certificate issuance confirmation

Example: Revenue Bureau

Must expose:

- Tax compliance check
- Payment posting
- Arrears calculation
- Revenue reconciliation status

4.5 Responsibility Matrix (Critical Issue)

Key Question:

Who builds the API wrapper?

Options:

Option 1:
Ethio Telecom builds API wrapper layer.

Option 2:
Bureau IT team builds APIs.

Option 3:
MESOB system vendor builds integration layer.

Recommendation:

The responsibility must be clearly stated in contract before implementation begins.

No bureau integration should start without signed responsibility matrix.

4.6 Testing & Validation Checklist

Before go-live:

□ API test environment available
□ API performance test completed
□ Security penetration test completed
□ Error-handling scenario validated
□ SLA timing validation tested

4.7 Risk if Category A Not Ready

- Manual parallel processing continues
- Digital approval delayed
- SLA failure
- Political backlash
- Revenue reconciliation gaps

CATEGORY A SUMMARY

If bureau already has IT system:

Primary focus = API exposure & data cleaning.

Integration complexity = Medium.

Success depends on:

- Strong technical oversight
- Clear vendor responsibility
- Data governance discipline

END OF DOCUMENT 5 – PART 1

Covered:

✓ Stakeholder landscape
✓ Governance structure
✓ Bureau classification model
✓ Full readiness checklist for bureaus WITH IT systems

Reply with:

“Proceed with Document 5, Part 2.”

Next we will produce:

✓ Readiness framework for bureaus WITHOUT IT systems
✓ API development responsibility model
✓ Capacity building requirements
✓ Institutional reform controls
✓ Enforcement & compliance model.

📄 DOCUMENT 5

Stakeholder Mapping & Bureau Readiness Framework

Hawassa MESOB One-Stop Service Center

PART 2
(Sections 5–9: Readiness Framework for Bureaus WITHOUT IT Systems, API Development Responsibility Model, Capacity Building, Institutional Controls, Enforcement & Compliance)

---

5. READINESS FRAMEWORK

FOR BUREAUS WITHOUT EXISTING IT SYSTEMS (CATEGORY B)

These bureaus currently operate:

- Paper-based workflows
- Manual approval signatures
- Physical registers
- No digital database
- No integration capability

If these bureaus are not digitized properly, MESOB will become:

A digital front desk connected to manual back offices.

This must be avoided.

5.1 Category B Transformation Path

Each bureau without systems must undergo:

1. Business Process Documentation
2. Workflow Simplification

3. Data Model Definition
4. Basic Backend System Development
5. API Endpoint Creation
6. Staff Training
7. Data Migration (if necessary)

5.2 Business Process Documentation Checklist

Before system development:

□ Current workflow mapped
□ Approval hierarchy defined
□ Required documents listed
□ Processing timeline documented
□ Bottlenecks identified
□ Legal compliance confirmed

5.3 Workflow Simplification Requirement

Do NOT digitize inefficient manual processes.

Before development:

- Remove unnecessary approval layers
- Eliminate redundant signatures
- Define clear SLA timelines
- Standardize forms

Only optimized workflows should be digitized.

5.4 Backend System Development Requirements

For each Category B bureau:

Minimum required:

- Structured relational database
- Service management interface
- Approval routing logic

- Document upload capability
- Audit logging
- User role management

System must be:

- API-ready
- Modular
- Scalable

5.5 API Endpoint Creation (Mandatory)

Even if backend system is simple,
it must expose structured APIs for MESOB.

Required endpoints:

- Record creation
- Record update
- Status retrieval
- Approval confirmation
- Document attachment

Without APIs, integration cannot function.

---

6. API DEVELOPMENT RESPONSIBILITY MODEL

This is the most critical governance decision.

Because:

Ethio Telecom may provide infrastructure and operational systems (queue, hosting),
but may not automatically develop bureau-specific backend systems.

This must be explicitly defined.

6.1 Three Possible Responsibility Models

Model A: Ethio Telecom Full Stack Responsibility

Ethio Telecom provides:

- Hosting
- Core MESOB platform
- Backend systems for Category B bureaus
- API wrapper for Category A bureaus
- Integration layer

Advantage:
Single accountability.

Risk:
Vendor dependency & scope inflation.

Model B: Split Responsibility Model

Ethio Telecom provides:

- Hosting
- Network
- Queue system

MESOB Application Vendor provides:

- Backend systems
- API layer
- Workflow engine

Advantage:
Specialized integration quality.

Risk:
Coordination complexity.

Model C: Bureau-Driven API Development

Each bureau builds its own backend & APIs.

Risk:

- Inconsistent standards
- Delays
- Integration fragmentation
- Technical quality variation

Not recommended unless bureaus have strong IT teams.

6.2 Recommended Model for Hawassa

Given current context:

- Strong mayoral push
- Time-sensitive implementation
- Uneven IT capacity

Recommended:

Modified Model A with strict contract safeguards.

Meaning:

Ethio Telecom may act as infrastructure lead,
but:

Contract must clearly define:

- API development scope
- Backend system creation for Category B bureaus
- Ownership of source code
- Data ownership
- Exit/migration rights

---

7. CAPACITY BUILDING REQUIREMENTS

Technology alone is insufficient.

Institutional capacity must be built.

7.1 Technical Staff Training

For each bureau:

- API understanding
- Workflow monitoring
- Data entry discipline
- SLA tracking
- Basic system troubleshooting

7.2 MESOB Counter Staff Training

Must cover:

- Multi-service handling
- System navigation
- Payment reconciliation
- Citizen communication
- Escalation protocol

7.3 Executive Training

Mayor & Bureau Heads require:

- Dashboard interpretation
- SLA monitoring understanding
- Escalation procedure familiarity
- Data-driven decision use

---

8. INSTITUTIONAL CONTROL FRAMEWORK

MESOB must not operate in parallel with manual processes.

Policy must enforce:

“Digital-first and digital-only processing for Phase 1 services.”

8.1 Parallel Processing Prohibition

Once MESOB launches:

- No manual certificate issuance outside system
- No offline approval bypass
- No manual payment acceptance outside system

All transactions must be logged digitally.

8.2 SLA Enforcement Mechanism

Each service must have:

- Defined SLA timeline
- Automatic timer
- Escalation notification
- Performance reporting

Repeated SLA breach must trigger:

- Administrative review
- Performance warning

8.3 Performance Accountability Model

Monthly dashboard must show:

- Bureau SLA compliance rate
- Pending cases
- Revenue generated
- Escalation cases

Mayor reviews monthly.

---

9. ENFORCEMENT & COMPLIANCE MODEL

Strong mayoral authority is essential.

9.1 Executive Directive

Mayor must issue formal directive:

- MESOB Phase 1 services are mandatory digital channels
- All bureaus must comply
- SLA compliance required
- Data-sharing mandatory

9.2 Compliance Audit

Quarterly audit must verify:

- API functionality
- SLA compliance
- Data integrity
- Payment reconciliation
- Security logs

9.3 Corrective Action Framework

If bureau fails to comply:

Step 1: Warning
Step 2: Performance review
Step 3: Escalation to Executive Steering Committee
Step 4: Administrative action

CATEGORY B SUMMARY

If bureau has no IT system:

Primary focus = Backend creation + API exposure.

Integration complexity = High.

Risk = Institutional resistance + technical delays.

Mitigation = Clear vendor scope + mayoral enforcement.

DOCUMENT 5 COMPLETE

This concludes:

✓ Stakeholder mapping
✓ Governance structure
✓ Category A readiness framework
✓ Category B transformation model
✓ API responsibility model
✓ Capacity building plan
✓ Enforcement & compliance strategy
